Tracking Game State With Labels

Added in version	1.0.3
Status	Up-to date

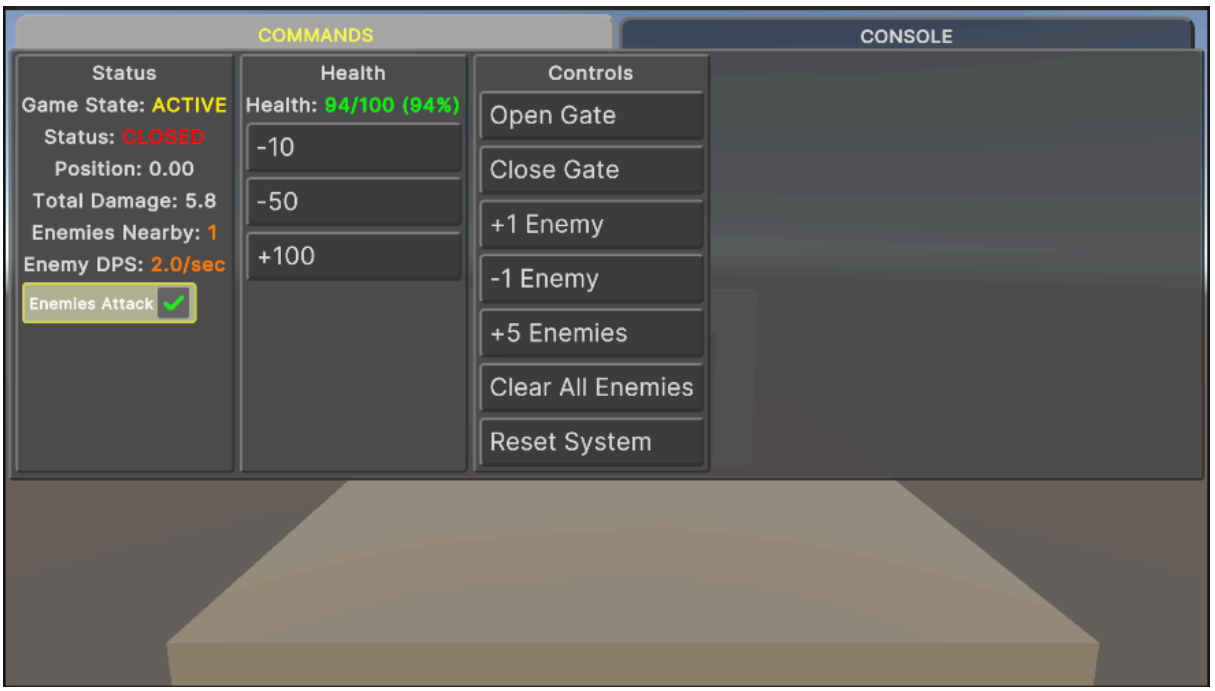

Sample overview

Sample overview

This sample shows a little simulation where enemies try to enter through the door.

All the simulation state is tracked through labels in Status group.

☝️ Try enter playmode and play a little with it

Generally creating dynamic labels is pretty simple, first you create it and cache the reference to a variable

```
// Left column - Status display
using (new Group(panel, GroupOptions.Vertical, groupName: "Status"))
{
    _gameStateLabel = panel.AddLabel(text: "Game State");
    _gateStatusLabel = panel.AddLabel(text: "Status");
    _gatePositionLabel = panel.AddLabel(text: "Position");
    _damageReceivedLabel = panel.AddLabel(text: "Total Damage");
    _enemyCountLabel = panel.AddLabel(text: "Enemies Nearby");
    _enemyDamageRateLabel = panel.AddLabel(text: "Enemy DPS");

    // Initial refresh
    RefreshAllLabels();
```

And then whenever your state updates also refresh the labels

```
private void RefreshAllLabels()
{
    if (_gateSystem == null) return;

    if (_gateHealthLabel != null)
    {
        var healthPercent :float = _gateSystem.HealthPercentage * 100f;
        var healthColor :string = healthPercent > 60f ? "green" : healthPercent > 30f ? "yellow" : "red";
        _gateHealthLabel.text =
            $"Health: <color={healthColor}>{_gateSystem.Health:F0}/{_gateSystem.MaxHealth:F0} ({healthPercent:F0}%)</color>";
    }

    if (_gateStatusLabel != null)
    {
        var statusColor :string = _gateSystem.IsOpen ? "green" : "red";
        _gateStatusLabel.text =
            $"Status: <color={statusColor}>{(_gateSystem.IsOpen ? "OPEN" : "CLOSED")}</color>";
    }

    if (_enemyCountLabel != null)
    {
        var countColor :string = _gateSystem.EnemyCount > 0 ? "orange" : "white";
        _enemyCountLabel.text = $"Enemies Nearby: <color={countColor}>{_gateSystem.EnemyCount}</color>";
    }
```

All the relevant to debug panel content is in `GameStateTrackingContentProviderExample.cs`, other scripts is related to simulation itself.
